

## INSTALLATION: WALLS

Rams Insulation is safe and poses no health risks during the installation process. No protective clothing is required when installing. Rams Insulation is durable, flexible and strong. Do not compress bulk insulation as this will reduce its effectiveness. Ensure there is sufficient space for the insulation to retain its normal thickness.

### WASTE

There is no waste when installing **Rams Insulation** as off-cuts can be used in areas that are difficult to get to and pieces can be easily compressed or wedged into spaces that have no insulation present

Before installing insulation ensure a qualified electrician has securely fixed electrical wiring to the stud wall or ceiling.

Rams Insulation is easy to cut by using either scissors or tearing the batt across the width.

To commence installation, simply start by stapling the top end and working downward. Ensure batts fit within the cavity without compression.

When stapling the insulation into the stud wall, it is important to allow clearance for the plaster board

Ensure that corners of walls, ceilings and floors are properly insulated as these are areas where heat leaks occur most often.

Installing Rams Insulation correctly will save you energy costs through-out the summer and winter months.
